We Revel in the Details

Supported by a complete line of performance and management accessories, each SBO™ system is tailored to meet your exact needs. Combined with our expert design service, we deliver solutions to boost the output of every part of your operation:

- Maximize revenue generating floor space.
- Minimize battery maintenance and repair.
- Operate 24/7 — without a battery room.

With SBO, you get everything you need to install, manage and support your fast charge operation.

CONTROL

DC CoolMAX™

The DC CoolMAX™ fan is designed specifically for facilities that experience high ambient temperatures, or operations that demand high throughput — or both. When used on vented tray batteries, DC CoolMAX keeps battery temperatures at an optimal range, and can even increase operator comfort.

DC HydroMAX™

With completely automatic operation, the DC HydroMAX™ makes battery watering easy. Connect to a water supply and DC HydroMAX works seamlessly with Aker Wade® chargers to refill the battery, mix the water and electrolyte and complete the finish cycle.

DC IntelliStack™

A DC IntelliStack™ light system displays battery status at a glance. You can quickly gauge a battery's state of charge, finish, equalization and completion status. Optional audible signals and extension poles makes it easy to read in any facility.

Installation Options

Turning a lift truck's parking space into its charging space requires flexibility. Aker Wade® offers a complete line of stands and cable management systems, allowing our fast chargers to mount to walls, columns, racks and almost any part of your facility.
